

Enabling Project-Based Learning

Roni Peer
CTO
Systematics, Ltd.
ronip@systematic.co.il

Agenda

- Project-Based Learning (PBL): What is it? Why is it important?
- How do we enable PBL?
- How to start using PBL
- University Examples
- Q&A

“When they went to school, the first thing they [children] had to learn was to **stop learning and to begin **being taught.**”**

– Dr. Seymour Papert
MIT

Keynote National School Boards Association Technology and Learning Conference 1994

What does industry think?

IEEE Survey: Industry Expectations for Entry-level Control Engineers and New Graduates

	Industry View: Essential, Important, or Useful	Faculty View: Key part of the curriculum
Linear Models	96.4%	95.6%
Control-Oriented Models for System Design	98.2%	67.0%
Simulation Models for System Verification or Product Development	94.5%	48.5%
Nonlinear Models	90.9%	42.3%
Finite State Machine Models	82.9%	33.0%
Real-Time Models for Hardware-in-the-Loop Verification or Training	94.4%	25.8%

Project-Based Learning

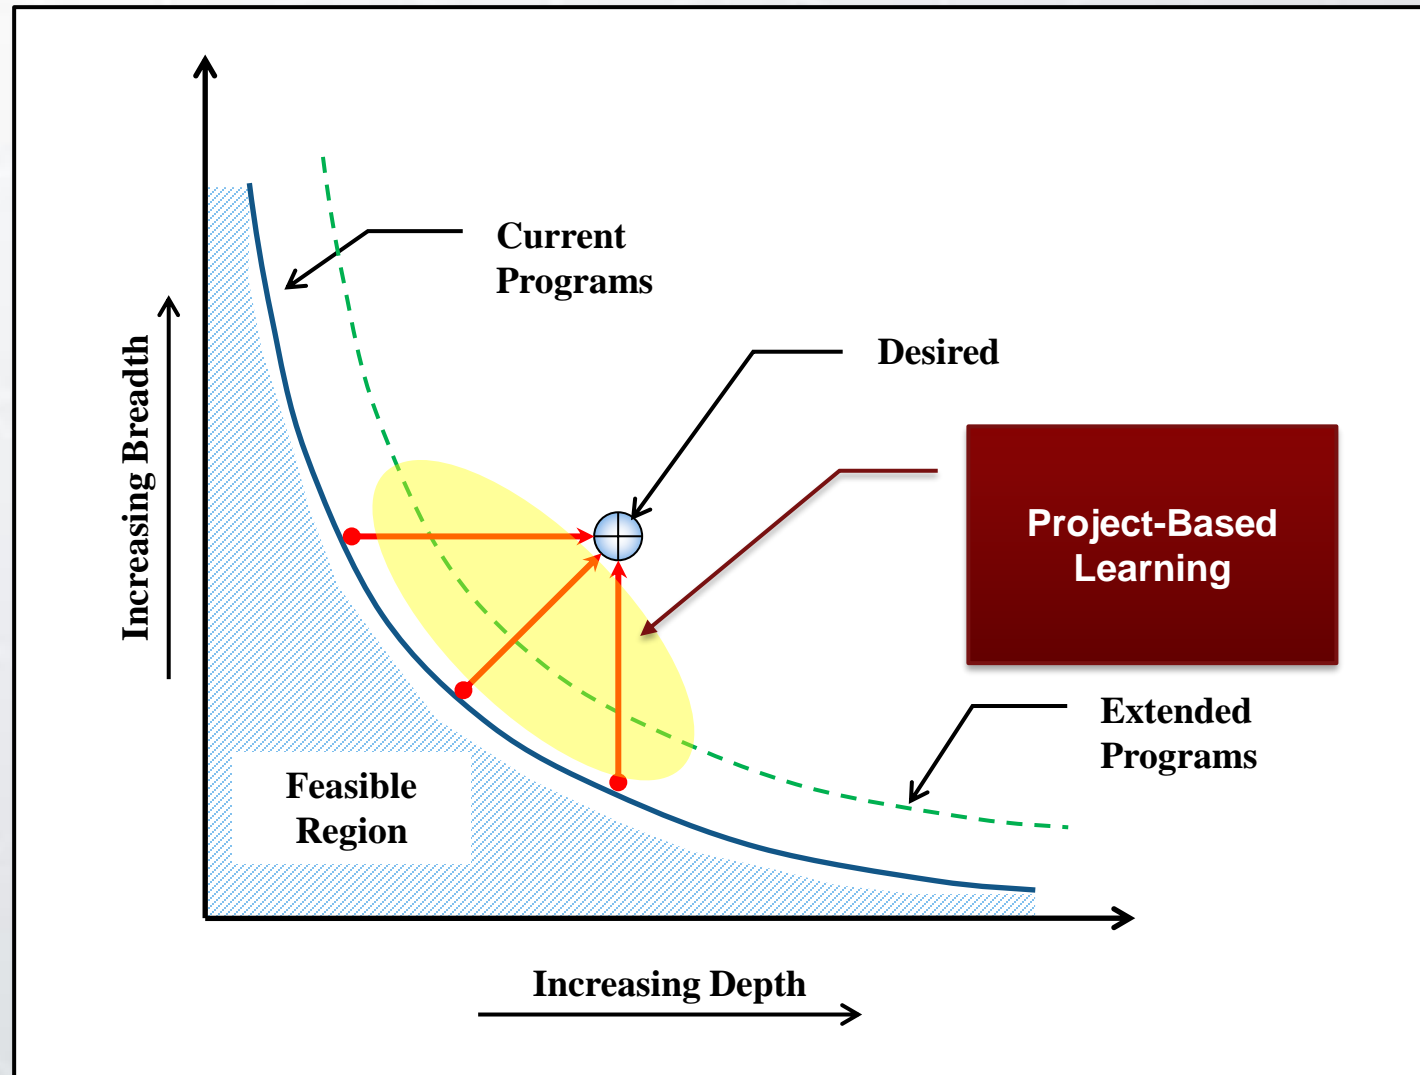

Project-Based Learning

Project-based learning is a comprehensive approach to classroom **teaching and learning** that is designed to engage students in investigation of **authentic problems**.*

* **Motivating Project-Based Learning: Sustaining the Doing, Supporting the Learning, Educational Psychologist**
[Volume 26, Issue 3-4](#), 1991

Challenge: Trade-offs in Engineering Curricula

Who are we - Systematics

Systematics' Mission

Systematics is a technology company that delivers and integrates solutions for digital transformation in the areas of science, engineering and manufacturing.

- Main industries: Aerospace and Defense, Electronics and Semiconductors, Med. Devices)
- Customers (~ 1000):
 - Large accounts like: IDF. Rafael. IAI, Elbit, Intel, Apple, Nvidia, Qualcomm, Applied Materials, ...
 - 50 Accelerators, 400 startups
 - All leading academic institutions (17 of them use Open Access license)
- Examples of projects: Space IL, Iron Dome, Armored Shield protection, UAV projects, Mobileye autonomous driving, GM autonomous parking system, cutting-edge Medical Robotics,)

Areas of Specialization

3D CAD / PLM

Dassault Systèmes

> **SOLIDWORKS** > **ENOVIA** > **CATIA**
> **3DEXPERIENCE**

Altium

Technical Computing
& Model-Based Design

MathWorks

> **MATLAB** & **Simulink**

Formlabs
Markforged
BCN3D

Solutions for Project-Based Learning

Simulation

Hardware

```
% create arduino object and connect to board
if exist('a') && isa(a,'arduino') && isempty(a),
    % nothing to do
else
    a=arduino('DEMO');
end

% initialize pins
disp('Initializing Pins ...');

% sets digital input pins
a.pinMode(2, 'INPUT');
a.pinMode(3, 'INPUT');
```

Hardware for Project-Based Learning

Use MATLAB and Simulink with a variety of hardware platforms for project-based learning. Options range from student-owned hardware to versatile solutions for controls, mechatronics, robotics, and signal processing in classroom labs.

 <p>Arduino Student-priced microcontroller board for introducing electrical engineering, motor control, and mechatronics</p>	 <p>Machine Science Microcontroller Kits Low-cost kit with Atmel ATmega168 microcontroller for building circuits on a solderless breadboard</p>
 <p>BeagleBoard Low-cost, single-board computer designed for audio, video, and digital signal processing</p>	 <p>Microchip dsPIC Microcontrollers Low-cost boards suitable for controls, signal processing, and custom prototyping</p>
 <p>Digilent Atlys Low-cost platform for real-world audio and video applications based on the Xilinx Spartan-6 FPGA</p>	 <p>PC-Based Vision Systems Imaging hardware for machine vision, including generic webcams, industrial cameras, and frame grabbers</p>
 <p>dSPACE ACE Kits Controller boards and software tools for developing and testing real-time control systems</p>	 <p>Quanser Hardware experiments, data acquisition cards, and Simulink models for teaching controls, mechatronics, and robotics</p>

Education Real-Time Target

Arduino

Lego NXT

BeagleBoard

PandaBoard

The screenshot shows the MATLAB and Simulink Courseware website. The header includes the title "Teach with MATLAB and Simulink", a search bar for "Courseware", and navigation links for "Overview", "Teach", "Learn", "Research", and "Student Programs". The main content area features a large banner with the text "MATLAB and Simulink Courseware" and a sub-header "Explore interactive teaching content and examples developed by MathWorks and educators from leading universities." Below the banner is a dropdown menu labeled "Explore courseware disciplines". The main content is organized into a grid of six categories: Interactive Examples, Labs, Assessments, Videos, Apps, and Books. Each category contains a representative image and a brief description of the content.

Interactive Examples	Labs	Assessments
 <p>Fourier Analysis Learn Fourier analysis using live scripts and MATLAB apps.</p>	 <p>Kalman Filter Virtual Lab Try interactive exercises to study linear and extended Kalman filter design for state estimation of a simple pendulum system.</p>	 <p>MATLAB Grader Assessment Content Easily start adding online assessments to your courses.</p>
Videos	Apps	Books
 <p>Tech Talks Explore fundamental concepts in science, mathematics, and engineering.</p>	 <p>Phase Plane and Slope Field Apps Use the Phase Plane and Slope Field apps to qualitatively analyze ordinary differential equations.</p>	 <p>Thinking Like an Engineer: An Active Learning Approach, 5th Edition This interactive courseware is designed to facilitate active learning for first-year engineering students.</p>

Reuse courseware developed by universities

Control tutorials by University of Michigan, Carnegie Mellon University and University of Detroit Mercy

- Using [Control tutorials](#) students can practice system modeling and analysis, control design and tuning using various examples
- Run [interactive control tutorials](#) in your browser
- [Check out this webinar](#) by Prof. Richard Hill for an overview of teaching modeling and controls with live script control tutorials

Examples

University of Stuttgart

Goal

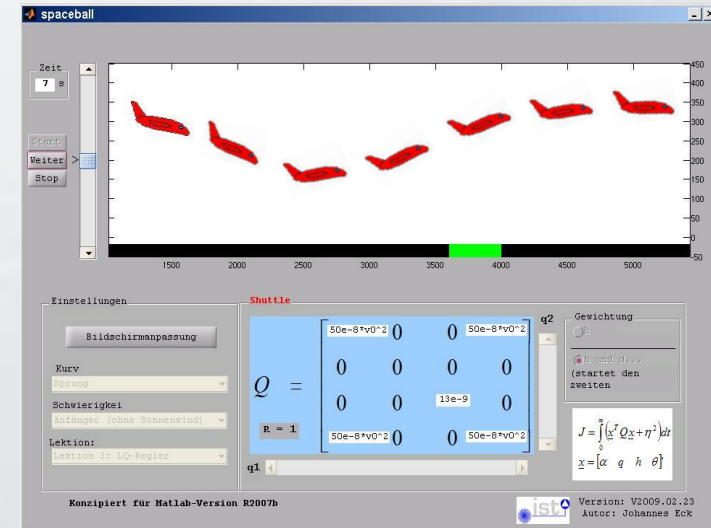

Excite students in Automatic Controls course; help them connect theory to real-world engineering

Approach

Customized MATLAB and Simulink to create *SpacecraftRT*, an educational game

Outcomes

- **Hands-on interactivity** rapidly engages students; provides context for theory
- Provides easy link between using GUI for **What-if exploration followed by learning** MATLAB and Simulink

“Games allow students to apply complex methods to realistic, yet simple, control problems.

It is a small step from GUI-based controller design to MATLAB coding.”

**Prof. Frank Allgöwer
Institute for Systems Theory and
Automatic Control**

Penn State GATE Program

- Teach the full development process
- Utilize a single platform for design, verification, hardware-in-the-loop testing, and final implementation
- Speed up student learning by introducing more concepts in the classroom and providing hands-on learning opportunities
- Equip students to “hit the ground running” when entering industry

“I was recruited to work at General Motors before I even finished graduate school. And I think that one of the things that made me attractive was my hands-on experience with tools like MATLAB and Simulink...”

Melanie Fox, PhD Candidate
Diesel Combustion Engineer, GM

Student Experience: Transitioning to Industry

“This high-level, abstract understanding of complex systems is a skill set that is highly sought after in the automotive industry these days.” **Joe Martin, former University of Michigan student**

“They were confident that I had the knowledge to excel in the position because the tasks I completed in EcoCAR were almost the same tasks that full-time controls engineers do.” **Jessica Britt, former Georgia Institute of Technology student**

Bosch and National Institute of Technology Calicut Collaborate on EV Course to Prepare Students for Industry

“The collaboration between NIT Calicut, MathWorks, and Bosch narrowed the gap between academia and industry, producing an electric vehicle system engineering course that has been both well received by our students and highly useful for them as well.”

— *Dr. Kumaravel Sundaramoorthy, NIT Calicut*

Project-Based Learning and Design with Simulation

Professor Claire Lucas, King's College London

1.00

Benefits

Simulation and Learning

- Combining mathematical and physical modelling gives **multiple perspectives** on systems
- Simulation is an integral part of the **design process** – modelling beyond understanding
- This is a key enabler for developing **systems thinking skills** – students learn how components behave when integrated together
- Bespoke **individual assessment environment** builds confidence in simulation software and is then utilised as a virtual test environment by students
- **Hardware in the loop** and deployment onto Arduino allows students to move between simulation and hardware in end-to-end workflow

Summary

Summary

- Project-Based Learning – Learning by Doing
- Multi-Domain projects
 - Simulation and hardware solutions
 - Multi-Domain integration
 - Industry-driven workflow for engineering education
